Permaset Aqua

FABRIC MAGIC

Permaset Aqua is a revolution in fabric & screen printing inks. By using advanced polymer technology combined with the purest pigments Permaset Aqua results in an environmentally friendly easy to use ink that provides long-term durability without compromising its superior soft handle.

Permaset Aqua incorporates both regular and Supercover colours.

Supercover colours are specifically designed to provide excellent coverage, opacity and definition over dark fabrics whilst retaining maximum stretchability. Both ranges incorporate 'glow' fluorescent colours; Aqua also includes four metallic and three Process Colours (see details overleaf).

With over 40 years of manufacturing experience, Permaset is recognised by both the professional trade and the fine artist as the premium supplier in screen printing inks. Our great heritage continues today with a dynamic reengineering of our successful line of quality fabric inks. In keeping with a proven track record of industry leading products, we have developed a water-based version offering superior performance eliminating the trade-off between durability and softness.

This 100% solvent free, environmentally friendly formula provides pigments that are rich in coverage, intense and produce exceptional colour yield. The resilient resin base holds fast during rub, wash or dry clean while having virtually no feel on fabrics.

Permaset Aqua performs at a higher standard with enhanced screen stability and an extended open time to produce cleaner results, longer. Ideal for use on Cotton, Polyester, Silk and most synthetic fabrics. Permaset Aqua is low odour and can be easily cleaned up with water. A first-rate innovation, Permaset Aqua is the perfect textile artwork solution that consistently enables limitless creativity.

Permaset Aqua colours can achieve great results on: Cotton, Polyester, Silk and most synthetic fabrics. All this without the need for any additives.

And can also be used on: Paper, lino, wood, for block printing and on most non-porous surfaces.

Screen Material: For Standard Colours, mesh size of 43T (110 TPI) monofilament or 10TXX multifilament is suitable. For Metallics, Phosphorescent and SuperCover Colours, 32T (86 TPI) monofilament or 8TXX multifilament is recommended. If stencils are to be used, they must be water resistant; check first.

The perfect fabric and screen printing colour

✓ 100% Solvent free ✓ Water-based ✓ Environmentally friendly ✓ Unsurpassed softness
✓ Low odour ✓ Enhanced screen stability ✓ Rub, wash & dry clean resistance
✓ Unparalleled adhesion ✓ Includes 'glow' 'metallic' and 'process' colours
✓ Plus Supercover colours for use on very dark fabrics

* Also available in Supercover (S/C)
The printed samples shown above are as near to the actual colours as offset printing permits
Conforms to ASTM D4236

JAR / CONTAINER SIZES

◆ 100mL (3.4 US Fl oz)
◆ 300mL (10 US Fl oz)
◆ 1L (33.8 US Fl oz)
◆ 4L (1.06 US Gal)
◆ 15L (3.96 US Gal)

Please note:
not all colours available in all sizes

ACCESSORIES

◆ TABLE ADHESIVE: Designed to hold the fabric in position during printing
◆ PHOSPHORESCENT GREEN: Enables "glow in the dark" effects
◆ PRINT PASTE: Where a more transparent shade is required or for mixing your own colours. Available in regular Aqua and Supercover

Available From:

Permaset Aqua
FABRIC MAGIC

WHICH WHITE DO YOU NEED?

◆ TRANSPARENT WHITE has minimum opacity and is designed for use as a blending white to achieve Pastel colours for printing on light fabrics. Lower levels of Titanium dioxide maintain softest handle of the print

◆ STANDARD WHITE is formulated with higher levels of titanium dioxide to achieve better opacity however a stiffer handle will result.

◆ SUPERCOVER WHITE is our Premium Opaque White for use on dark coloured fabrics

◆ FIRST DOWN WHITE is a Flash White designed for Trade printers who wish to use regular Aqua colours on darker fabrics
